

WHAT IS BUYER'S CONSOLIDATION

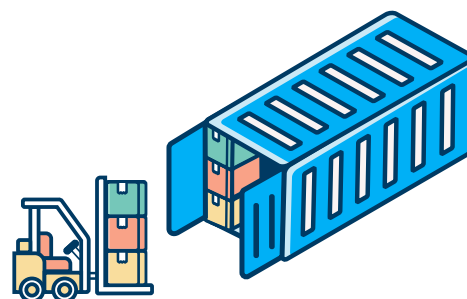

Buyer's consolidation is a logistics practice where multiple shipments from different suppliers are combined into one cohesive shipment by the buyer or importer.

Instead of handling individual shipments separately, this approach allows for the consolidation of goods from various sources into a single, cost-effective shipment. In other words, multiple LCL shipments from different buyers are combined into a single FCL shipment.

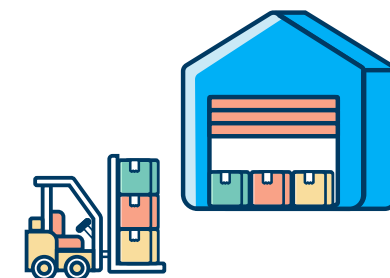

Multiple Suppliers

Consolidation of the multiple suppliers' cargos into one shipment

Buyer receives one shipment
