

## WHAT IS BONDED WAREHOUSING

A bonded warehouse is a secure facility where imported goods can be stored without the immediate payment of customs duties. Duties and taxes are only paid when the goods are released from the warehouse for sale or further distribution. These warehouses operate under customs supervision, ensuring that goods are not tampered with or sold without the proper clearance.

**Key Benefits:** These warehouses provide a significant cash flow advantage by delaying duty payments, offering time to process customs paperwork, and allowing for goods to be inspected and repackaged under customs supervision.

When to Use: Commonly used by importers and exporters dealing with large volumes of goods, especially when trading between regions with complex customs regulations, such as between China and Europe.

## WHAT IS NON-BONDED WAREHOUSING

A non-bonded warehouse is a standard storage facility where goods can be stored after customs duties and taxes have been paid. Unlike bonded warehouses, these facilities are not under direct customs supervision. Once goods enter a non-bonded warehouse, they are cleared for sale or further distribution, making them immediately available for market entry.

**Key Benefits:** Non-bonded warehouses offer quick access to your goods, enabling immediate distribution without customs delays. This is ideal for businesses with fast-moving inventory or seasonal products, ensuring rapid market response and turnover.

When to Use: Non-bonded warehousing is used when speed to market is essential, particularly for retailers or manufacturers with stable demand. It's the best choice when you need goods readily available for quick distribution.

# THE DIFFERENCE BONDED VERSUS NON-BONDED WAREHOUSE

**Customs & Duties:** In bonded warehousing, duties are deferred until goods are released, aiding cash flow. Non-bonded warehousing requires upfront duty payment, making goods ready for immediate market entry.

**Usage & Market Response:** Bonded warehouses are ideal for high-value or uncertain-demand goods, offering flexibility to delay market entry. Non-bonded warehouses suit businesses needing quick access to inventory, perfect for fast-moving or seasonal products.

**Customs Supervision & Processing:** Bonded warehouses operate under strict customs control, allowing goods to be stored and processed without clearing customs. Non-bonded warehouses offer faster processing and distribution, without customs oversight.

**Risk Management:** Bonded warehousing helps mitigate risks by holding goods during volatile market conditions. Non-bonded warehousing simplifies logistics for stable, predictable supply chains.

# THE DIFFERENCE BONDED VERSUS NON-BONDED WAREHOUSE

	<b>Bounded Warehouse</b>	Non-Bonded Warehouse
<b>Customs &amp; Duties</b>	Duties deferred until goods are released	Duties paid upfront
<b>Usage &amp; Market Response</b>	High-value goods Delayed market entry	Fast-moving or seasonal goods
<b>Customs Supervision &amp; Processing</b>	Stored under customs control	No Customs control
Risk Management	Mitigate risks under volatile market	Simplified logistics under stable supply chain

### OUR SERVICES

ASI Logistics offers a complete range of value-added logistics & freight forwarding services from, to, and within Asia.

- SEA FREIGHT
- AIR FREIGHT
- MULTIMODAL TRANSPORTATION
- CONSOLIDATION
- INTEGRATED, DOOR-TO-DOOR TRANSPORT & REPORTING
- SCALABLE & CONNECTED WAREHOUSING & DISTRIBUTION
- VALUE-ADDED LOGISTICS SERVICES
- E-COMMERCE CROSS BORDER
